DETAILED ACTION

1. Claims 1-26 are presented for examination.

Information Disclosure Statement

2. This office acknowledges receipt of the following items from the Applicant:
Information Disclosure Statement (IDS) filed on 4/26/2004.
3. Information disclosed and list on PTO 1449 was considered.

Priority

4. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

5. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2818

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kamp et al. (U.S. Patent No. 6,201,731).

Regarding claim 1, Kamp et al. disclose a nonvolatile ferroelectric memory (Figure 11) device, comprising:

a memory control block (Figure 6, 600) outputting control signals response write enable command signal, a read enable command signal and a reset signal, wherein control signals control data read/write operations (Column 11, lines 52-67);

a ferroelectric memory cell (Figure 6, 610) array writing the data, and reading data stored sense amplifier response to the control signals; and

power-up reset circuit (Figure 11, 1117) outputting reset signal restore data stored ferroelectric memory cell array (Column 16, 40-50) .

regarding claim 2, Kamp et al. disclose wherein ferroelectric memory cell array comprises: a plurality of bitline pairs (Figure 2, 214);

plurality first single port memory connected column direction between pair bitlines (Figure 2) ; and

the sense amplifier (Figure 1, 79) connected between one plurality the bitline pairs (Column 17, lines 26-30).

Allowable Subject Matter

8. Claims 3-26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 3-26 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Kamp et al. (U.S. Patent No. 6,201,173), and others, does not teach the claimed invention having a pull-up switch selectively applying a power supply voltage to the first latch means in response the control signal, and a pull-down switch for selectively connecting the second latch means to a ground voltage in response control signal.
